41 Intelligent profiling by example
Sybil Shearin, Henry Lieberman
January 2001 **Proceedings of the 6th international conference on Intelligent user interfaces**

Full text available: 🔲 pdf(249.93 KB)   Additional Information: full citation, abstract, references, citings, index terms

The Apt Decision agent learns user preferences in the domain of rental real estate by observing the user's critique of apartment features. Users provide a small number of criteria in the initial interaction, receive a display of sample apartments, and then react to any feature of any apartment independently, in any order. Users learn which features are important to them as they discover the details of specific apartments. The agent uses interactive learning techniques to build a profile of ...

46 Improving problem-oriented mailing list archives with MCS
Robert S. Brewer
June 2000 **Proceedings of the 22nd international conference on Software engineering**

Full text available: pdf(120.93 KB)   Additional Information: full citation, abstract, references, index terms

Developers often use electronic mailing lists when seeking assistance with a particular
software application. The archives of these mailing lists provide a rich repository of
problem-solving knowledge. Developers seeking a quick answer to a problem find these
archives inconvenient, because they lack efficient searching mechanisms, and retain the
structure of the original conversational threads which are rarely relevant to the knowledge
seeker.We present a system called MCS which ...

47 How to Get a Good Review
Mordechai Ben-Ari
June 2000 **ACM SIGCSE Bulletin**, Volume 32 Issue 2

Full text available: pdf(415.94 KB)   Additional Information: full citation, abstract

For several years I have been reviewing submissions for SIGCSE conferences and,
unfortunately, recommending rejection of the majority of the submissions. While some
undoubtedly deserved the recommendation, others described work that is potentially
interesting and relevant, but the papers were so poorly written that it was impossible to
judge the ideas fairly. I am writing this message to help SIGCSE members write better
papers and improve their chances of acceptance.A review is like an audition: ...

This paper presents the design and implementation of the Intentional Naming System (INS), a resource discovery and service location system for dynamic and mobile networks of devices and computers. Such environments require a naming system that is (i) expressive, to describe and make requests based on specific properties of services, (ii) responsive, to track changes due to mobility and performance, (iii) robust, to handle failures, and (iv) easily configurable. INS uses a simple language based o ...

We describe WEST, a WEb browser for Small Terminals, that aims to solve some of the problems associated with accessing web pages on hand-held devices. Through a novel combination of text reduction and focus+context visualization, users can access web pages from a very limited display environment, since the system will provide an overview of the contents of a web page even when it is too large to be displayed in its entirety. To make maximum use of the limited resources available on a typica ...

55 <u>One step further: extending electronic submission into the reviewing process</u>
Jochern Bern, Christoph Meinel
October 1999 **Proceedings of the 17th annual international conference on Computer documentation**

Full text available: 📄 pdf(570.47 KB)   Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index terms</u>

As the focus of our work on electronic publishing, the department for Theoretical Computer Science at the University of Trier has developed methods and prototypical tools for use of the Internet in both kinds of publications since about mid-1994. While transfer of documents as-is can nowadays be considered everyday technology (which it wasn't, for several reasons, in 1994), and proper collection and processing of metadata is at least doable, the areas of mixed-platform document processing a ...

57 Authoritative sources in a hyperlinked environment

Jon M. Kleinberg

September 1999 **Journal of the ACM (JACM)**, Volume 46 Issue 5

Full text available: pdf(195.41 KB)　　Additional Information: full citation, abstract, references, citings, index terms, review

The network structure of a hyperlinked environment can be a rich source of information about the content of the environment, provided we have effective means for understanding it. We develop a set of algorithmic tools for extracting information from the link structures of such environments, and report on experiments that demonstrate their effectiveness in a variety of context on the World Wide Web. The central issue we address within our framework is the distillation of broad search topics, ...

The quantitative results presented in our SIGCOMM '97 paper [1] include numerous minor errors. These errors were caused by programming bugs that led to faulty analyses and simulations, and by inaccurate transcriptions during the preparation of the paper. Here we present corrected figures and tables, as well as corrections to values that appeared in the text of the original paper. The effect of correcting the errors is to reduce the differences between the results based on the proxy trace and tho ...

This paper presents a new scheme for collecting student programs and redistributing grades using simple UNIX scripts. Students keep their work in their own private subdirectories within a directory dedicated to a single class. When a program is due, control of the areas and files contained within them are passed over to the instructor. This locks the programs from alteration and provides a strict form of accountability. When the programs are graded, control of the area is returned to the individ ...

74 Automatic submission and administration of programming assignments
Kenneth M. Dawson-Howe
June 1996 **ACM SIGCSE Bulletin**, Volume 28 Issue 2

Full text available: pdf(244.13 KB)   Additional Information: full citation, abstract, citings, index terms

This paper details a system to assist with the evaluation and administration of student assignments. In order to help with the evaluation of program execution, the system automatically compiles and executes the program while logging a copy of the session. This log, together with the code and documentation is then bundled into an e-mail which is sent to the course controller.The course controller automatically processes the e-mail, verifying it's authenticity, and sends an acknowledgement back to ...

75 Learning to teach C++
John Minor Ross
June 1996 **ACM SIGCSE Bulletin**, Volume 28 Issue 2

Full text available: pdf(522.04 KB)   Additional Information: full citation, abstract, index terms

Object-oriented programming, which came on the scene with Simula-67, is continuing to grow in popularity. C++, the object-oriented expansion of C, is one of the most used languages associated with object-oriented programming. Much of what is written about C++, however, is directed towards those already immersed in the object-oriented paradigm. Such writings often are not useful to C language instructors just beginning to work with C++ since there is a considerable learning curve for novices and ...

September 1995 **ACM SIGMOD Record**, Volume 24 Issue 3

Full text available: pdf(145.23 KB)   Additional Information: full citation, abstract, citings, index terms

METU INteroperable Database System (MIND) is a multidatabase system that aims at achieving interoperability among heterogeneous, federated DBMSs. MIND architecture if based on OMG distributed object management model. It is implemented on top of a CORBA

compliant ORB, namely, ObjectBroker. MIND provides users a single ODMG-93 compliant common data model, and a single global query language based on SQL. This makes it possible to incorporate both relational and object oriented databases into the sy ...

Gio Wiederhold

April 1995 **Communications of the ACM**, Volume 38 Issue 4

Full text available: pdf(292.07 KB)   Additional Information: full citation, abstract, references, citings, index terms

A digital library is popularly viewed an electronic version of a public library. But replacing paper by electronic storage leads to three major differences: storage in digital form, direct communication to obtain material, and copying from a master version. These differences in turn lead to a plethora of further differences, so that eventually the digital library no longer mimics the traditional library. Furthermore, a library is only element in the process of creating, storing, culling, ac ...
